

**MD Anderson Cancer Center
Department of Pathology
Selective (Thoracic) Pathology Fellowship
Openings: 2022-23 and 2023-24**

The Thoracic Pathology fellowship program at MD Anderson is a one-year fellowship geared towards training fellows in all aspects of thoracic pathology, with emphasis on neoplastic lung disease. The selected individual will rotate in the clinical service rendering provisional microscopic diagnosis and supervising the gross pathology dictation and sampling of thoracic cases.

The fellow will be responsible for previewing and establishing the diagnosis for each case seen in the department (in house biopsies, resections, referrals and general consults). The fellow will also assist in the gross examination of complex surgical resection specimens, correlate the results of cytogenetics and molecular testing with the final diagnosis of cases, interact with clinical colleagues from Head and Neck Oncology and Thoracic Surgery departments to obtain additional pertinent clinical information, as well as support the multidisciplinary conferences.

In addition, the fellow will be exposed to non-neoplastic pathology, which includes 10-15% of our daily practice. The ranges of non-neoplastic disease include infectious, fibrotic and rejection processes, among other things.

Requirements

Candidates must be board certified or eligible for certification in anatomic pathology or AP/CP.

Please check complete [GME Eligibility Requirements](#) prior to applying.

Application Instruction:

Please submit CV and 4 letters of recommendation (which include one letter of good standing from the candidate's program director) to MMgilliam@mdanderson.org

Stipends

Commensurate with the candidate's level of training.
